Server Explosion

Power outage caused a computer to fail... it wont turn on

Saving and Loading

AJAX is used to send the stored data

Django will handle storing/loading the user's files

Demo

Custom Functions

```
function classname_functionname () {
    do stuff with variables
    return value;
}

function default_sum() {
  var output = 0;
  for (var i =0; i < arguments.length; i++){
    output += arguments[i];
  }
  return output;
}
```

Future Features

User file storage

Loading and saving

Command line function calls

Relative cell positions when copying cells

Beautification

Default equations for the spreadsheet

Better array manipulation through functions

Thanks
